- 16.0 oz. (1 lb.) trays of Honeysuckle White Ground Turkey Patties with a Use or Freeze by Date of 09/18/2011
- 16 oz. (1 lb.) trays of Kroger Ground Seasoned Turkey Patties Fresh 85/15 with a Use or Freeze by Date of 09/17/2011

The products subject to recall today bear the establishment number "P-963" inside the USDA mark of inspection. The products were produced on August 23, 24, 30 and 31 of this year.

The strain of *Salmonella* Heidelberg in question is identical to that of an outbreak of Salmonellosis that resulted in an [August 3, 2011 recall](#) of ground turkey products. Although a sample tested positive for the outbreak related strain of *Salmonella*, including the identical XbaI and BlnI PFGE patterns matching the August 3 outbreak strain, at this time, neither FSIS nor the plant is aware of any illnesses associated with product from the above dates. An FSIS incident investigation team collected samples at the establishment following the previous recall. Today's recall occurred after a product sample collected on August 24 tested positive for the outbreak strain of *Salmonella* Heidelberg. The firm is recalling product from August 30 based on pending positive match samples. The products subject to recall are derived from bone-in parts.

These products were distributed at the retail level nationwide. Cargill Meat Solutions Corporation requests that consumers who may have purchased these products return them to the point-of-purchase. When available, the retail distribution list(s) will be posted on FSIS' website at www.fsis.usda.gov/FSIS_Recalls/Open_Federal_Cases/index.asp.

Consumers with questions about this recall should contact Cargill's consumer relations toll free telephone number at 1-888-812-1646. Media with questions regarding the recall should contact Cargill's media contact Mike Martin at michael_martin@cargill.com or (316) 291-2126.

FSIS routinely conducts recall effectiveness checks to verify recalling firms notify their customers of the recall and that steps are taken to make certain that the product is no longer available to consumers.

To prevent salmonellosis and other foodborne illnesses, wash hands with warm, soapy water for at least 20 seconds before and after handling raw meat and poultry, and cook poultry-including ground turkey-to 165° F, as determined with a food thermometer. FSIS is continuing to work with [CDC](#), affected state public health partners, and the company on the investigation. If you have symptoms, consult a health care provider.

Consumption of food contaminated with *Salmonella* can cause salmonellosis, one of the most common bacterial foodborne illnesses. *Salmonella* infections can be life-threatening, especially to those with weak immune systems, such as infants, the elderly, and persons with HIV infection or undergoing chemotherapy. The most common manifestations of salmonellosis are diarrhea, abdominal cramps, and fever within 6 to 72 hours. Additional symptoms may be chills, headache, nausea and vomiting that can last up to seven days. The outbreak strain of *Salmonella* Heidelberg is resistant to several commonly prescribed antibiotics; this antibiotic resistance may be associated with an increased risk of hospitalization or possible treatment failure in infected individuals.
